Plastic Pallets Provide Egg-cellent Solution for Fragile Deliveries

Transporting fragile goods safely can be a challenge at the best of times but Steven Rimmer Eggs has cracked it thanks to the plastic pallets supplied by Goplasticpallets.com.

Each week Steven Rimmer Eggs delivers 65,000 weight-graded, quality checked eggs direct from the farm in its refrigerated delivery vans throughout Southport, Merseyside and West Lancashire. Looking for a more hygienic and lighter weight alternative to his existing wooden pallets, Steven approached Goplasticpallets.com and several other plastic pallet suppliers.

Steven's request was quite specific; he was looking for a 5 or 6 runner plastic pallet that could be loaded easily by forklift onto his delivery vans, which are each fitted with a pallet roller system. And, most importantly he needed an anti-slip solution to ensure his fragile cargo would be delivered crack-free!

Steven said, "I approached a number of suppliers but Goplasticpallets.com impressed me the most with the attentive way they responded to my enquiry – offering both a range of product options and promising a speedy delivery."

The product Goplasticpallets.com recommended was its popular APB 1210 Pool Perforated 5R pallet, which was supplied without lips and with anti-slip strips to provide extra stability for the loaded eggs in transit.

Steven Rimmer Eggs purchased 10 of the plastic pallets with specialist anti-slip strips, which Goplasticpallets.com branded in their warehouse with the company logo.

Steven added, "I'm delighted with my new slip-resistant pallets. They work seamlessly with my roller system on the vans. I use four pallets at any one time, and each pallet can carry 18 boxes with 360 eggs in a box. The other six pallets remain on the farm ready to be loaded on my return for the next delivery."

Is it time you decided to 'Leave the wood. Go plastic'? Contact Goplasticpallets.com's expert sales team today on 01323 744057 or by email sales@goplasticpallets.com
